Other Suggestions

Faculty suggests improving a computer science course's library and syllabus by adding more textbooks, incorporating industry-oriented topics and practical, and improving labs with advanced software. The syllabus should be revised to include internships and include the latest software for practical subjects. The library should be updated, and students should be encouraged to visit for more information. The syllabus content is well-structured and engaging, but there is room for improvement in student engagement and motivation strategies. The course should strike a balance between theoretical knowledge and practical skills and include English subjects in the second and third years to develop proficiency levels.
